Version release history

Version	Date	Comments
1.0	2 October 2023	NT procedure based on NEM version 5.3
1.1	1 September 2024	Change of effective date only
1.2	1 September 2024	NT procedure based on NEM version 5.7
1.5	1 December 2025	Updated based on NEM v6.1

Prepared by:	NT Electricity System & Market Operator
Version:	1.5
Effective date:	1 December 2025
Status:	Final
Approved for distribution and use by:	
Approved by:	Simon Middleton
Title:	Senior Manager Electricity Market and Reform
Date:	18 July 2025

1   Introduction

1.1   Purpose and scope

This document details the data requirements for the various data elements comprising the CATS Standing Data stored for each *NMI*, together with relevant examples and definitions.

This document forms part of the MSATS procedures in the Communications Guideline and will be amended when required. The consultation process applicable to the Communications Guideline will also apply to the necessary amendments to this document.

1.2   Definitions and interpretation

The Communications Guideline:

a.   is incorporated into and forms part of this document; and

b.   should be read with this document.

   Table numbering through this document matches the equivalent NEM procedure. Missing table numbers have been omitted from this procedure as not applicable in the NT.

   The NT Procedures are based on the equivalent MSATS and B2B procedure documents from the National Electricity Market (NEM). To maintain document alignment where a section or element of the NEM MSATS and B2B procedures is not used in the NT procedures this has been replaced with the phrase 'Not used in the NT Procedures' rather than that section or element be deleted from the NT Procedures.

NTESMO

2   Background

The five MSATS master tables contain the standing data stored for each *NMI*. They are the following:

Table 1   MSATS Master Tables

Table	Summary of Contents
CATS_NMI_DATA	Address, TNI Code, DLF Code, aggregate flag, embedded network names, Jurisdiction, NMI status code, etc.
CATS_NMI_PARTICIPANT_RELATIONS	Roles and associated Participants. Separate records are maintained for each Role/Participant relationship.
CATS_NMI_DATA_STREAM	Not used in the NT Procedures
CATS_METER_REGISTER	Meter Serial ID, meter type, meter manufacturer, test results, etc.
CATS_REGISTER_IDENTIFIER	Meter Serial ID, Network Tariff Code, unit of measure etc.

For a *NMI* to be capable of being used in MSATS, it must have the following minimum set of data:

a.   At least one record on the CATS_NMI_DATA table; and

b.   At least eight records on the CATS_NMI_PARTICIPANT_RELATIONS table, one for each of the mandatory roles (ROLR, LNSP, LR, RP, FRMP, MDP, MPC and MPB).

It will also normally have:

a.   At least one record on each of the CATS_METER_REGISTER and CATS_REGISTER_IDENTIFIER (there should be at least one record for each *meter* and register associated with the *NMI*) tables.

NMIs may or may not have:

a.   Records on the CATS_NMI_DATA_STREAM table. This table is not used in the NT Procedures

Every time a change is made to any of the data in any of these tables, the old records are made inactive and new records are created, thus ensuring that there is a complete history of all changes.

NTESMO

3 Conventions used within this document

The format of the data fields in the 'Browser Format Column'' column of Tables is as defined in Section 16. The following information defines the coded entries in columns used in Tables 3, 6, 9, 12, 15, 18 and 21..

3.1 Column Headed: Standing Data Required

The column indicates the requirement to provide this data to MSATS.

Table 2   Explanation of Standing Data Requirements

Requirement	Description
MANDATORY	Transfer, Validation or processing cannot proceed without this data.
REQUIRED	This data must be provided if this information is available.
OPTIONAL	This data is not required, but will be accepted if delivered.

3.2 NMIs Affected

Data must be provided for every *NMI* in MSATS. The *NMIs* that must be registered in MSATS are:

a. All connection points where a transmission network connects to a *distribution network*, i.e. bulk supply connection points.

b. All *transmission network connection points* where *energy* is directly purchased from the *spot market* by a *Market Customer*, i.e. *wholesale connection points*.

c. All type 7 *loads*.

d. All *connection points* associated with a *generating unit* classified by a *Market* Generator.

e. All *distribution network connection points* where *energy* is directly purchased from the *spot market* by a *Market Customer.*

f. All *connection points* associated with a registered *integrated resource system* that is connected to the transmission *network*, i.e. transmission-connected integrated resource system.

g. All *connection points* associated with a registered *integrated resource system* that is connected to the *distribution network*, i.e. distribution-connected integrated resource system.

h. All *distribution network connection points* where there is a *market load*.

NTESMO

4 CATS_METER_REGISTER

4.1 Field Definitions

The CATS_Meter_Register table is a NMI master table containing data that is stored at the Meter Register level. Information stored at this level includes the NSRD. It is updated whenever a Change Request containing inbound Meter Register data is completed.

Table 3   CATS_METER_REGISTER – Field Definitions

Data Element Name	Description	Standing Data Required	Party to Provide
CurrentTransformerLocation	A free text field to indicate the location of the current transformer at the site.	REQUIRED	MPB
CurrentTransformerType	Whether the current transformer at the metering installation is single phase or three phase. This value must correspond to a valid Current Transformer Type value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED	MPB
CurrentTransformerRatioAvailable	The available ratio of the current transformer at the metering installation. This value must correspond to a valid Current Transformer Ratio (Available) value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED	MPB
CurrentTransformerRatioConnected	The connected ratio of the current transformer at the metering installation. This value must correspond to a valid Current Transformer Ratio (Connected) value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED	MPB
CurrentTransformerAccuracyClass	The accuracy class of the current transformer at the metering installation. This value must correspond to a valid Current Transformer Accuracy Class value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED	MPB
CurrentTransformerTest	Type of test performed on metering installation with Current Transformer which can be one of the following: • TESTED(definition – part of 100% testing) • SAMPLE TESTED (definition – tested as part of a sample plan) • SAMPLE (definition – part of an approved sample plan) This value must correspond to a valid transformer test value in the Valid Transformer Test Values reference table listed in section 11.	REQUIRED	MPB

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
CurrentTransformerTestDate	A date that represents actual test date for metering installations with Current Transformer tested or date represents family expiry date for those included in an approved sample plan.	REQUIRED	MPB
GPSCoordinatesLat	GPS Coordinates Latitude is the angular measurement North or South of the equator in decimal degrees (5-7 decimal places). Angles South of the equator will be represented as negative values. E.g. -37.8886755. It is the latitude of the metering installation and not of the site.	For NMIs with manually read meters: REQUIRED for 36 months from effective date of these Procedures, MANDATORY thereafter. For NMIs with remotely read meters: MANDATORY for new NMIs established from the effective date of these Procedures and all NMIs when they have a physical field site visit, REQUIRED for all other NMIs. Where no GPS coverage is available, a value of 0.0000 (5-7 decimal places) is to used. Not Used for NMIS for Type 7.	MPB
GPSCoordinatesLong	GPS Coordinates Longitude is the angular measurement East or West of the prime meridian in decimal degrees (5-7 decimal places). Angles East of the Prime Meridian (e.g. Australia) will be represented as positive values. E.g. +145.1410361. It is the longitude of the metering installation and not of the site.	For NMIs with manually read meters: REQUIRED for 36 months from effective date of these Procedures, MANDATORY thereafter. For NMIs with remotely read meters: MANDATORY for new NMIs established from the effective date of these Procedures and all NMIs when they have a physical field site visit, REQUIRED for all other NMIs. Where no GPS coverage is available, a value of 0.0000 (5-7 decimal places) is to used. Not Used for NMIS for Type 7.	MPB
LastTestDate	The date on which the *metering installation* was last tested or inspected by the Metering Provider "B".	REQUIRED	MPB

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
Hazard	Free text or code identifying hazards associated with reading, maintaining or installing the *meter*. If the following are present at the *metering installation*, they should be listed in this field: Asbestos	REQUIRED	MPB
InstallationTypeCode	The InstallationTypeCode may identify attributes of a physical *metering installation*, *metering data* collection methods or *metering data* calculation methods. This value must correspond to a valid Meter Installation Type Code as referenced in NT MSATS Procedures: CATS Procedures.	MANDATORY	MPB
Location	Free text descriptive material identifying the relationship between the location of the *metering point* and the *connection point*.	REQUIRED	MPB
Manufacturer	Free text field to identify the manufacturer of the installed *meter*. This field will be an enumerated list of values corresponding to current Meter Manufacturers in the industry with the options of UNMETERED and UNKNOWN.	MANDATORY	MPB
Model	Free text field to identify the *meter* manufacturer's designation for the *meter* model. This field will be an enumerated list of values corresponding to current Meter Models in the industry with the options of UNMETERED and UNKNOWN.	MANDATORY	MPB
ReadTypeCode	Code to denote the method and frequency of Meter Reading. First Character = Remote (R) or Manual (M); Second Character = Mode T = telephone W = wireless P = powerline I = infra-red G = galvanic V = visual Third Character = Frequency of Scheduled Meter Readings 1 = Twelve times per year 2 = Six times per year 3 = Four times per year D = Daily or weekly Fourth Character =	REQUIRED	MPB

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
	• A – 5 minute • B – 15 minute • C – 30 minute • D – Cannot convert to 5-minute (i.e. due to metering installation de-energised • M – Manually Read Accumulation Meter For example, MV3M = Manual, Visual, Quarterly, Manually Read Accumulation Meter; RWDC = Remote, Wireless, Daily, 30 minutes interval, RWD = Remote, Wireless, Daily (applicable for Vic AMI metering installations where InstallationTypeCode = 'MRIM' and JurisdictionCode = 'Victoria').		
SerialNumber	The Meter Serial ID uniquely identifies a *meter* for a given *NMI*. Maximum 12 Characters (alpha numeric). Unique for *NMI*. Use dummy for UMCP (Type 7), logical (meters) and *non-contestable unmetered loads*. Except for UMCP, SerialNumber should be as displayed on the physical device (also known as property number). SerialNumber to be property number if exists, otherwise the *meter* manufacturer's serial number, otherwise dummy number.	MANDATORY	MPB
Status	A code to denote the status of the *meter*. This value must correspond to a valid Meter Register Status as specified in the NT MSATS Procedures: CATS Procedures.	MANDATORY	MPB
Use	A code identifying how the *meter* is used. This value must correspond to a valid Meter Use value in the Valid Meter Use Codes reference table listed in section 11.	MANDATORY	MPB
NextScheduledReadDate	Indicates the Scheduled Next Read Date for the *meter* if a manual Meter Reading is required.	MANDATORY for manually read meters, REQUIRED for Type 7 metering installations with calculated metering data where the forward estimate process is using a BLOCK methodology, and NOT USED for remotely read meters =	MPB initially, then MDP for updates
NMI	*NMI*. This number is unique for each *connection point* within the *NEM*.	MANDATORY	LNSP
TestResult	The result from the test perfomed on the date indicated in the LastTestDate field. This value must correspond to a valid Test Result value in the Valid Test Result Codes reference table listed in section 11.	REQUIRED	MPB

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
VoltageTransformerLocation	A free text field to indicate the location of the voltage transformer at the site.	REQUIRED	MPB
VoltageTransformerType	Whether the voltage transformer at the metering installation is single phase or three phase. This value must correspond to a valid Voltage Transformer Type value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED	MPB
VoltageTransformerRatio	The available or connected ratio of the voltage transformer at the metering installation. This value must correspond to a valid Voltage Transformer Ratio value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED	MPB
VoltageTransformerAccuracyClass	The accuracy class of the voltage transformer at the metering installation. This value must correspond to a valid Voltage Transformer Type value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED	MPB
VoltageTransformerTest	Type of test performed on metering installation with Voltage Transformer which can be one of the following: • TESTED(definition – part of 100% testing) • SAMPLE TESTED (definition – tested as part of a sample plan) • SAMPLE (definition – part of an approved sample plan) This value must correspond to a valid transformer test value in the Valid Transformer Test Values reference table listed in section 11.	REQUIRED	MPB
VoltageTransformerTestDate	A date that represents actual test date for metering installation with Voltage Transformer tested or date represents family expiry date for those included in an approved sample plan.	REQUIRED	MPB
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	Participant sending transaction
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially.	MANDATORY	System generated

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
	If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.		
CreationDate	Date and time the record was created.	MANDATORY	System generated

4.2 Cross Reference of Browser and aseXML Data Elements

The table below lists the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 4CATS_Meter_Register – Browser Cross Reference

Browser Field Name	aseXML Data Element Name	aseXML Path	Browser Format	aseXML Data Type
Current Transformer Location	CurrentTransformerLocation	ElectricityMeter/CurrentTransformerLocation	VARCHAR(50)	xsd:string maxLen = 50

4.3 Field value examples

This section provides examples of typical sets of data element values associated with different types of *connection points*.

The data shown in each example is as shown in the Browser. This reverses the sequence of the day-month-year communicated via aseXML transactions.

Table 5 MSATS_Meter_Register – Example

Data Element Name (as it appears in XML documents)	Browser Field Name (as it appears in MSATS Browser)	Basic Example	Interval Example	Data Element Name
CurrentTransformerLocation	Current Transformer Location		BEHIND DOOR	CurrentTransformerLocation
CurrentTransformerType	Current Transformer Type		A	CurrentTransformerType
CurrentTransformerRatioAvailable	Current Transformer Ratio Available		20/50/100:5	CurrentTransformerRatio
CurrentTransformerRatioConnected	Current Transformer Ratio Connected		400:5	CurrentTransformerRatio
CurrentTransformerAccuracyClass	Current Transformer Accuracy Class		0.2M	CurrentTransformerAccuracyClass
CurrentTransformerTest	Current Transformer Test		Tested	CurrentTransformerTest
CurrentTransformerTestDate	Current Transformer Test Date		01-01-2020	CurrentTransformerTestDate
GPSCoordinates - Latitude	GPSCoordinatesLat	-37.8886755	-37.8886755	
GPSCoordinates - Longitude	GPSCoordinatesLong	+145.1410361	+145.1410361	
LastTestDate	Last Test Date	07-05-2004	07-03-2004	LastTestDate
Hazard	Meter Hazard		Asbestos	Hazard
InstallationTypeCode	Meter Installation Type Code	BASIC	COMMS4	InstallationTypeCode

5 CATS_DLF_CODES

5.1 Field Definitions

The CATS_DLF_Codes table contains a list of DLF Codes and their relevant values. The StartDate and DLFCode fields will need to be provided for settlements calculations.

Note: References to 'LNSP' include the ENM for child connection points.

Table 6 CATS_DLF_CODES – Field Definitions

Data Element Name	Description	Standing Data Required	Party to Provide
DistributionLossFactorCode	A four character alpha-numeric code used to identify DLF values. All *NMIs* must be assigned a DLF Code. Refer to AEMO Distribution Loss Factor documents for each financial year..	MANDATORY	AEMO
DistributionLossFactorDescription	Description of the DLF Code and value.	MANDATORY	AEMO
DistributionLossFactor Value	Numeric value up to 5 decimal places, reflecting the value of the DLF Code.	MANDATORY	AEMO
JurisdictionCode	Jurisdiction code to which the *NMI* belongs. This value must correspond to Jurisdiction Code values as specified in the MSATS Procedures: CATS Procedures.	MANDATORY	AEMO
RowStatus	Indicates whether the DLF Code is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	AEMO
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

5.2   Cross Reference of Browser and aseXML Data Elements

The table below lists the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 7   CATS_DLF_Codes - Browser Cross Reference

Browser Field Name	aseXML Data Element Name	aseXML Path	Browser Format	aseXML Data Type
DLF Code	DistributionLossFactorCode	DistributionLossFactorCode	VARCHAR2(4)	xsd:string maxLen = 4
Description	DistributionLossFactorDescription	DistributionLossFactorDescription	VARCHAR2(50	xsd:string maxLen = 50

NTESMO

Browser Field Name	aseXML Data Element Name	aseXML Path	Browser Format	aseXML Data Type
DLF Value	DistributionLossFactorValue	DistributionLossFactorValue	NUMBER(6,5)	xsd:decimal minIncl = 0 maxIncl = 6 totdig = 6 fracdig = 5
Jurisdiction	JurisdictionCode	ElectricityStandingData/MasterData/JurisdictionCode	VARCHAR2(3)	xsd:string maxLen = 3
Activity Status	RowStatus	RowStatus	CHAR(1)	xsd:string with enumeration
Start Date	FromDate	FromDate	dd-mmm-yyyy	xsd:dateTime
End Date	ToDate	ToDate	dd-mmm-yyyy	xsd:dateTime
Updated On	MaintenanceDate	MaintenanceDate	dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen)	xsd:dateTime

5.3 Field value examples

This section provides examples of typical sets of data element values associated with different types of *connection points*.

The data shown in each example is as shown in the Browser. This reverses the sequence of the day-month-year communicated via aseXML transactions.

Table 8 CATS_DLF_Codes - Example

Data Element Name	Browser Field Name	Basic & Interval Example
DistributionLossFactorCode	DLF Code	NHV1
DistributionLossFactorDescription	Description	UMPLP - High Voltage

NTESMO

DistributionLossFactorValue	[The actual DLF value]	1.11111
JurisdictionCode	Jurisdiction Code	SA
RowStatus	Activity Status	A
FromDate	Start Date	01-07-1999
ToDate	End Date	30-06-2000
MaintenanceDate	Updated On	31-05-2000 00:30:27
CreationDate		01-06-1999 00:23:32

6 CATS_EMB_NET_ID_CODES

6.1 Field Definitions

The CATS_EMB_NET_ID_CODES table contains embedded network identifier codes, which are used to identify which *embedded network* a *NMI* belongs to, either as a Parent NMI or a Child NMI.

Note: References to 'LNSP' include the LNSP for *child connection points*.

Table 9   CATS_EMB_NET_ID_CODES – Field Definitions

Data Element Name	Description	Standing Data Required	Party to Provide
EmbeddedNetworkIdentifier	Embedded Network Code. Refer to Allocation of Embedded Network Codes for further details.	MANDATORY	AEMO
EmbeddedNetworkDescription	Description of embedded network identifier.	MANDATORY	AEMO
SuburbOrPlaceOrLocality	Locality to which the embedded network identifier belongs.	MANDATORY	AEMO

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
PostCode	Postcode for the locality to which the embedded network identifier belongs.	MANDATORY	AEMO
StateOrTerritory	State or Territory abbreviation in accordance with AS 4590.	MANDATORY	AEMO
RowStatus	Indicates whether the code is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	AEMO
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

6.3   Field value examples

This section provides examples of typical sets of data element values associated with different types of *connection points*.

The data shown in each example is as shown in the Browser. This reverses the sequence of the day-month-year communicated via aseXML transactions.

Table 11   CATS_Emb_Net_ID_Codes - Example

Data Element Name	Browser Field Name	Basic & Basic Example
EmbeddedNetworkIdentifier	Code	SE01008111
EmbeddedNetworkDescription	Description	Kingston-On-Murray Caravan Park
SuburbOrPlaceOrLocality	Suburb / Locality	Kingston-On-Murray
PostCode	Postcode	5331
StateOrTerritory	State	SA
RowStatus	Activity Status	A
FromDate	Start Date	5/04/2003
ToDate	End Date	31/12/9999

MaintenanceDate	Updated On	31/12/9999
CreationDate	Creation On	1/04/2003 13:23

7　CATS_NMI_DATA

7.1　Field Definitions

The CATS_NMI_DATA table records Master NMI Record data information. It is updated whenever a Change Request containing data in the CATS_INBOUND_NMI_DATA table is completed.

*Table 12　CATS_NMI_DATA – Field **Definitions***

Data Element Name	Description	Standing Data Required	Party to Provide
NMI	*NMI*. All alpha characters are Upper Case	MANDATORY	LNSP
NMI ClassificationCode	Code used to indicate the NMI Classification Code of this *NMI*. This value must correspond to NMI Classification Code values as specified in the MSATS Procedures: CATS Procedures.	MANDATORY	LNSP
MasterData/ StatusCode	Code used to indicate the status of the *NMI*. This value must correspond to NMI Status Code values as specified in the MSATS Procedures: CATS Procedures.	MANDATORY	LNSP
TransmissionNode Identifier	This value must correspond to a valid code in the CATS_TNI_Codes table.	MANDATORY	LNSP
TransmissionNode Identifier2	Not used in the NT Procedures		
SharedIsolationPointFlag	Set to N in the NT as field is not used in the NT		

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
MeterMalfunctionExemptionNumber	Not used in the NT Procedures.		
MeterMalfunctionExemptionExpiryDate	Not used in the NT Procedures		
JurisdictionCode	Jurisdiction code to which the *NMI* belongs. This code defines the jurisdictional rules which apply to the transfer of this *NMI*. This value must correspond to Jurisdiction Code values as specified in the MSATS Procedures: CATS Procedures.	MANDATORY	LNSP
DistributionLoss FactorCode	Distribution Loss Factor Code. Must be a valid code in the CATS_DLF_Codes table.	MANDATORY	LNSP
ConnectionConfiguration	Two-character code to denote information about the configuration of the connection point. First Character = Connection Type. H = *High voltage* (as defined in the NER) L = Low voltage (lower than the threshold defined for *high voltage* in the NER) Second Character = Phases In Use. This refers to phases to the NMI. 1 = Single Phase 2 = Two-Phase 3 = Three-Phase Information registered with a Greenfield NMI may be subject to change during the connection process. Information may be subject to change during the NMI lifecycle.	MANDATORY	LNSP
ChildEmbedded NetworkIdentifier	The embedded network identifier code is used to identify which embedded network this given *NMI* is the 'child of'. (If on a NMI record this field is not populated, it is assumed the *NMI* is not the child of any other *NMI*.) Must be a valid code within the CATS_Emb_Net_ID_Codes table. This field cannot be used unless the Parent NMI has been created and assigned an embedded network identifier code. Refer section 30.4.a of the CATS Procedure.	REQUIRED	LNSP
ParentEmbedded NetworkIdentifier	The embedded network identifier code is used to identify which *embedded network* this given *NMI* is the 'parent of'. (If on a *NMI* record this field is not populated, it is assumed the *NMI* is not the parent of any other *NMI*.) Must be a valid code within the CATS_Emb_Net_ID_Codes table	REQUIRED	LNSP

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
BuildingOrProperty Name	Defines the primary building or property name per Australian Standard AS4590.1:2017 5.8 Address site name.	REQUIRED	LNSP
	The official place name or culturally accepted common usage name for an address site, including the name of a building, homestead, building complex agricultural property – for scenarios where the address is similar to "Rose Cottage, 9 Garden Walk, Happy Valley Retirement Village, 75 Davis Steet, NORWOOD SA 5067 Building 4A-4B Smith St".		
	For example, BuildingOrPropertyName = HAPPY VALLEY RETIREMENT VILLAGE		
	BuildingOrPropertyName2 = ROSE COTTAGE.		
BuildingOrProperty Name2	Defines the secondary building or property name within a complex site as per Australian Standard AS4590.1:2017 5.6.5.4 Secondary complex (or utility) name.	REQUIRED	LNSP
	The name given to an entire building or area within an address site that has its own separate address -– for scenarios where the address is similar to "Rose Cottage, 9 Garden Walk, Happy Valley Retirement Village, 75 Davis Steet, NORWOOD SA 5067 Building 4A-4B Smith St".		
	For example:		
	BuildingOrPropertyName2 = ROSE COTTAGE, BuildingOrPropertyName = HAPPY VALLEY RETIREMENT VILLAGE.		
LotNumber	The lot reference number allocated to an address prior to street numbering. The word 'LOT' is not required.	REQUIRED	LNSP
FlatOrUnitNumber	Specification of the number of the flat or unit which is a separately identifiable portion within a building/complex.	REQUIRED	LNSP
FlatOrUnitType	Specification of the type of flat or unit which is a separately identifiable portion within a building/complex. This value must correspond to a valid Flat Type Code, reference AS4590.	REQUIRED	LNSP
FloorOrLevelNumber	Floor Number is used to identify the floor or level of a multi-storey building/complex.	REQUIRED	LNSP
FloorOrLevelType	Floor Type is used to identify the floor or level of a multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type Codes, reference AS4590.	REQUIRED	LNSP
HouseNumber	The numeric reference of a house or property. Specifically the house number.	REQUIRED	LNSP
HouseNumberSuffix	The numeric reference of a house or property. Specifically the single character identifying the house number suffix.	REQUIRED	LNSP
HouseNumberTo	The numeric reference of a house or property for scenarios where the address is similar to 4-10 Smith St. For example, HouseNumber	REQUIRED	LNSP
	= 4 and HouseNumberTo = 10 where the address is 4-10 Smith St.		

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
HouseNumberToSuffix	The numeric reference of a house or property. Specifically the single character identifying the house number suffix to for scenarios where the address is similar to 4A-4B Smith St. For examples, HouseNumber = 4, HouseNumberSuffix = A, HouseNumberTo = 4 and HouseNumberToSuffix = B where the address is 4A-4B Smith St.	REQUIRED	LNSP
StreetName	Defines the street name per Australian Standard AS4590.1:2017 5.6.5.1 Complex road name and 5.10.1 Road name. The combination of Street Name, Street Type and Street Suffix may occur up to two times. This field may only contain letters, numbers, hyphens ('-') and spaces Records the thoroughfare name. See notes at end of table for more information on Structured Addresses	REQUIRED	LNSP
StreetSuffix	Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590.	REQUIRED	LNSP
StreetType	Records the street type abbreviation. This value must correspond to a valid Street Type Code, reference AS4590.	REQUIRED	LNSP
SuburbOrPlaceOrLocality	The full name of the general locality containing the specific address.	MANDATORY	LNSP
LocationDescriptor	A general field to capture various references to address locations alongside another physical location.	REQUIRED	LNSP
PostCode	The descriptor for a postal delivery area, aligned with locality, suburb or place.	MANDATORY	LNSP
StateOrTerritory	Defined State or Territory abbreviation.	MANDATORY	LNSP
GNAFPID	The Geocoded National Address File (G-NAF) Persistent Identifier (PID) for a given address.	REQUIRED	LNSP/ AEMO
SectionNumber	Not used in the NT Procedures		
DPNumber	Not used in the NT Procedures		
DeliveryPointIdentifier	Delivery point identifier - the numeric descriptor for a postal delivery point which is equal to a physical address. The values are in the range 10000000 – 99999999.	REQUIRED	LNSP/ AEMO

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
Aggregate	This flag determines whether the energy at this *connection point* is to be treated as consumer *load* or as a *generating unit* (this may include *generator* auxiliary loads). MSATS will initially set this field to "Y" This value must correspond to a valid Aggregate value in the Aggregate Codes reference table listed in section 11.	OPTIONAL	(Defaults to 'Y', AEMO updates to 'N' as required)
Feeder Class	Not used in the NT Procedures		
Customer Classification Code	A code that defines the consumer class as defined in the MSATS Procedures, or in overriding Jurisdictional instruments.	MANDATORY	Current FRMP
Customer Classification Threshold Code	A code that defines the consumption threshold as defined in the MSATS Procedures, or in overriding Jurisdictional instruments.	MANDATORY	LNSP
Last Consumer Change Date	The date a consumer starts or ends as the account holder for a premises.	MANDATORY	Current FRMP
Defect Flag	A flag that identifies a defect at site which prevents a metering upgrade	MANDATORY	MC
Defect Type	A defect within the end users housing of the metering installation or electrical wiring preventing a metering installation replacement or repair of a legacy meter.	MANDATORY	MC
Originating MC	The MC that raised the defect flag	MANDATORY	MC
Legacy Meter Replacement Plan	A plan developed and published by the DNSP to replace legacy meters	MANDATORY	LNSP
FromDate	Start date of the NMI Data record. This indicates the date on which the parameters of this particular NMI data record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	LNSP
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

7.2   Cross Reference of Browser and aseXML Data Elements

The table below lists the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 13   CATS_NMI_Data

Browser Field Name	aseXML Data Element Name	aseXML Path	Browser Format	aseXML Data Type
NMI	NMI	NMI	CHAR(10)	xsd:string maxLen = 10
NMI Classification Code	NMIClassificationCode	ElectricityStandingData/MasterData/ NMIClassificationCode	VARCHAR2(8)	xsd:string maxLen = 8

CustomerThresholdCode	Customer Threshold	LOW	HIGH

NTESMO

8 Not used in the NT Procedures

9 CATS_Register_identifier

9.1 Field Definitions

The CATS_Register_Identifier table contains data that is stored at the register identifier level. Information stored at this level includes the Network Tariff Code. It is updated whenever a Change Request containing inbound register identifier data is completed.

Table 18 CATS_REGISTER_IDENTIFIER – Field Definitions

Data Element Name	Description	Standing Data Required	Party to Provide
NMI	NMI. This number is unique for each connection point within the NEM.	MANDATORY	MPB
SerialNumber	The Meter Serial ID uniquely identifies a meter for a given *NMI*. Maximum 12 Characters (alpha numeric). Unique for NMI. Use dummy for UMCP (Type 7),.. Except for UMCP, , MeterSerial should be displayed on physical device also known as property number). SerialNumber to be property number if exists, otherwise the meter manufacturers' serial number, otherwise dummy number.	MANDATORY	MPB
RegisterID	The RegisterID is used to identify a data source that is obtained from the meter. A single *meter* may provide multiple data sources.	MANDATORY	MPB
NetworkTariffCode	The Network Tariff Code is a free text field required. The text must match the Network Tariff Codes supplied and published by the LNSP. Must be a valid code from the CATS_Network_Tariff_Codes table.	MANDATORY	MPB
NetworkAdditional Information	Free text field.	REQUIRED	MPB
UnitOfMeasure	Code to identify the unit of measure for data held in this register.	MANDATORY	MPB

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
TimeOfDay	Code to identify the time validity of register contents.	MANDATORY	MPB
	As published by each LNSP. This value must correspond to a valid Time of Day value in the Time of Day Codes reference table listed in section 11. For Interval meters, use code "INTERVAL".		
Multiplier	Multiplier required to take a register value and turn it into a value representing billable energy	MANDATORY	MPB
DialFormat	Describes the register display format.	MANDATORY	MPB
	First number is the number of digits to the left of the decimal place, and the second number is the number of digits to the right of the decimal place.		
Suffix	The Suffix field in the CATS_REGISTER_IDENTIFIER table is used to identify a physical data source that is obtained from the meter. The value must match the value provided in the MDFF File. The Suffix value must be unique for each meter register. The Suffix in the CATS_REGISTER_IDENTIFIER table must be valid specified in the NT NMI Procedure.	MANDATORY	MPB
	For Basic Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table need not match the RegisterID in the CATS_REGISTER_IDENTIFIER table. For basic data streams, the value will be identical to the related Suffix value in the CATS_NMI_DataStream table.		
	For Interval Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table will indicate the individual datastreams:		
	contributing to the Nx Suffix value in the CATS_NMI_DataStream table, or		
	associated with the individual register level interval datastream records.		
ControlledLoad	Indicates whether the energy recorded by this register is created under a Controlled Load regime ControlledLoad field will have "NO" if register does not relate to a Controlled Load. If the register relates to a	MANDATORY	MPB
	Controlled Load, it must correspond to a valid Controlled Load value in the Controlled Load Codes reference table		
	listed in section 11.		
RegisterDetail/ Status	Lookup code to indicate if register is active.	MANDATORY	MPB
	Must ensure that RegisterDetail/Status is not Current (C) when ElectricityMeter/Status is Removed (R).		
	This value must correspond to a valid Register Identifier Status as specified in the MSATS Procedures: CATS Procedures.		
ConsumptionType	Actual/Subtractive Indicator.	MANDATORY	MPB
	Actual (A) implies volume of energy actually metered between two dates.		
	Cumulative (C) indicates a Meter Reading for a specific date. A second Meter Reading is required to determine the consumption between those two Meter Reading dates.		
	For an Interval Meter, ActCumInd = A.		
	This value must correspond to a valid ConsumptionType from the Consumption Type Codes reference table listed in section 11.		

NTESMO

Data Element Name	Description	Standing Data Required	Party to Provide
FromDate	Start date of the NMI data record. This indicates the date on which the parameters of this particular NMI data record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	Participant sending transaction
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

9.2　Cross Reference of Browser and aseXML Data Elements

The table below lists the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 19   CATS_Register_Identifier - Browser Cross Reference

Browser Field Name	aseXML Data Element Name	aseXML Path	Browser Format	aseXML Data Type
NMI	NMI	NMI	CHAR(10)	xsd:string maxLen = 10
Meter Serial ID Meter ID (Different on two screens)	SerialNumber	SerialNumber	VARCHAR2(12)	xsd:string maxLen = 12

9.3 Field value examples

This section provides examples of typical sets of data element values associated with different types of connection points.

The data shown in each example is as shown in the Browser. This reverses the sequence of the day-month-year communicated via aseXML transactions.

Table 20   CATS_Register_Identifier - Example

Data Element Name	Browser Field Name	Basic Example	Interval Example
NMI	NMI	1100445566	2211335544
SerialNumber	Meter Serial ID Meter ID (Different on two screens)	000012345	112258
RegisterID	Register ID	1	E1
NetworkTariffCode	Network Tariff Code	BLNB2CO	MB2RI

Data Element Name	Browser Field Name	Basic Example	Interval Example
NetworkAdditionalInformation	Network Tariff Additional Information	All day tariff	LV TOU Demand Eligible
UnitOfMeasure	Unit of Measure	KWH	KWH
TimeOfDay	Time of Day	ALLDAY	INTERVAL
Multiplier	Multiplier	1.00000	120.00000
DialFormat	Dial Format	5.00	5.10
Suffix	Suffix	11	E1
ControlledLoad	Controlled Load	YES	NO
Status	Status Code	C	C
ConsumptionType	Actual/Cumulative Indicator	C	A
FromDate	Start Date	01-08-2004	01-06-2005
ToDate	End Date	31-12-9999	31-12-9999
MaintenanceDate	Updated On	31-12-9999	31-12-9999
CreationDate	Created On	01-11-2005 22:30:30	05-06-2005 09:09:09
RowStatus	Activity Status	A	A

NTESMO

10　CATS_NMI_PARTICIPANT_RELATIONS

10.1　Field Definitions

The CATS_NMI_Participant_Relations table is a NMI master table containing data that stores the Roles that Participants play for each *NMI*. It is updated whenever a Change Request containing inbound Roles is completed. Each Role record, which contains a single Role code and a single Participant ID, has a start date and an end date, as well as information about when it was created and when it became inactive if it is no longer an active record.

Table 21　CATS_NMI_PARTICIPANT_RELATIONS – Field Definitions

Data Element Name	Description	Standing Data Required	Party to Provide
Party	The Participant ID whose relationship (Role) with the *NMI* is defined in this table.	MANDATORY	LNSP
NMI	NMI. This number is unique for each connection point.	MANDATORY	LNSP
Role	This defines the relationship (Role) of the Participant with the *NMI* in this table.	MANDATORY	LNSP
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	Party sending transaction
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated

NTESMO

Data Element Name	Description		Standing Data Required	Party to Provide
CreationDate	Date and time the record was created.		MANDATORY	System generated

10.2 Cross Reference of Browser and aseXML Data Elements

The table below lists the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 22   CATS_NMI_Participant_Relations - Browser Cross Reference

Browser Field Name	aseXML Data Element Name	aseXML Path	Browser Format	aseXML Data Type
Participant ID	Party	Party	VARCHAR2(10)	xsd:string
NMI	NMI	NMI	CHAR(10)	xsd:string maxLen = 10
Role	Role	Role	VARCHAR2(4)	xsd:string maxLen = 4
Start Date	FromDate	FromDate	dd-mmm-yyyy	xsd:dateTime
End Date	ToDate	ToDate	dd-mmm-yyyy	xsd:dateTime
Updated On	MaintenanceDate	MaintenanceDate	dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen)	xsd:dateTime
Created On	CreationDate	CreationDate	dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen)	xsd:dateTime
Activity Status	RowStatus	RowStatus	CHAR(1)	xsd:string with enumeration

Valid Transformer fields values can be found at the following location:

https://markets-portal-help.docs.public.aemo.com.au/Content/MSATSuserGuides/UpdateMeteringData.htm?TocPath=MSATS%7CMetering%20Data%7C_____5

Table 28   Valid Meter Use Codes

Meter Use	Description
REVENUE	Revenue meter. or unmetered load.
CHECK	Check meter.
STATISTICAL	Statistical meter.
TUOS	TUOS meter.
LOGICAL	Logical meter.
SAMPLE	Sample meter.
AVERAGE	Average meter.
PREPAID	Prepaid meter.
INFORMATION	Information meter.
UNKNOWN	Unknown meter use code.

NTESMO

Table 29   Valid Time of Day Codes

TimeOfDay	Description
ALLDAY	All day
INTERVAL	Interval time of day, used for all Interval metering
PEAK	Peak time of day
BUSINESS	Business time of day
SHOULDER	Shoulder time of day
EVENING	Evening time of day
OFFPEAK	Off peak time of day
CONTROLLED	Controlled time of day
DEMAND	Demand is used for describing a register

Table 30   Valid Controlled Load Codes

ControlledLoad	Description
NO	No controlled load
YES	There is controlled load associated with a controlled load network tariff on this register
EXT	There is controlled load which is externally switched by the LNSP associated with a controlled load network tariff on this register

Table 31 Valid Test Result Codes

Test Result	Description
PASS	Test has passed
FAIL	Test has failed

Table 32 Valid Transformer Test Values

Test Result	Description
TESTED	Part of 100% testing
SAMPLE TESTED	Tested as part of a sample plan
SAMPLE	Part of an approved sample plan

Table 33   Valid Shared Isolation Point Flag Values

NTESMO

SharedIsolationPointFlag	Description
Y	Indicates that a Shared Fuse Arrangement is present
N	Indicates that no Shared Fuse Arrangement is present
I	Indicates the metering installation is Isolated independently but still part of a Shared Fuse Arrangement
U	Indicates that the presence of a Shared Fuse Arrangement is Unknown

Note: Refer to the MSATS CATS Procedure section 4 for details on the valid codes for the following:

- Jurisdiction Codes
- Metering Installation Type Codes
- NMI Classification Codes
- NMI Status Codes

Table 34   Defect at the metering installation

| Code	Description
ASBESTOS	Friable asbestos is present and must be removed
BOXDAMAGED	The meter box is damaged or not weather proof.
ISONCOM	An isolation device (non-service fuse) is present but cannot be operated.
LIVEWIRING	Suspected exposed terminals or parts behind panel making opening of panel unsafe.
NOSPACE	The existing metering installation cannot accommodate all metering equipment and must be upgraded.
PANELLOC	The current location of meter panel is non-complaint and must be relocated.
PANELNCOM	Meter panel is non-compliant and must be upgraded.
WIRINGDET	Damaged or deteriorated wiring; includes presence of Vulcanised Indian Rubber (VIR) cables.
WIRINGNCOM	Non-compliant wiring identified including earthing system issues that must be repaired.

12   Use of NMI suffix to populate CATS_REGISTER_IDENTIFIER

For any particular connection point there may be multiple *energy* measurement elements and data recorders with multiple channels. Accurate identification of Datastreams is essential.

The NMI Procedure includes the requirements for structure of the Suffix populated in the CATS_REGISTER_IDENTIFIER table..

The illustrations below provide context to the relationships between 'Suffix' across the MDFF Specification and CATS Procedures (specifically the CATS_REGISTER_IDENTIFIER table and CATS_DATA_STREAM tables).
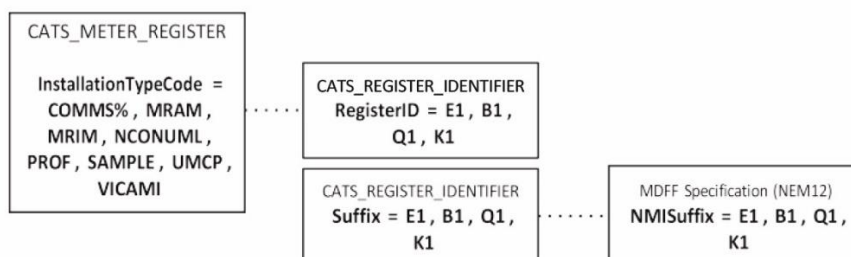

NTESMO

Example of an Accumulated Meter 'Suffix'
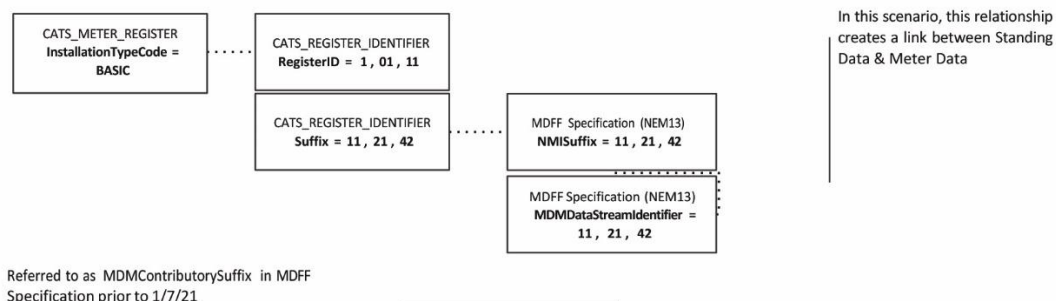

Example of an Interval Meter 'Suffix
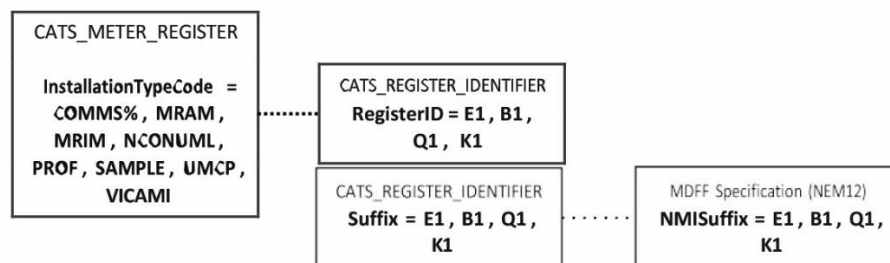

Example of an Interval Meter "Suffix" – Register Level

12.1   Not used in the NT Procedures

13   Assignment of data – ACCUMULATION meters

This section details examples of the assignment of data for various basic *metering installations*. For Accumulation Meters, the Suffix values in CATS_REGISTER_IDENTIFIER and CATS_NMI_DATA_STREAM tables are always numeric.

13.1   Single Meter, no controlled load

The CATS_REGISTER_IDENTIFIER table indicates that the *meter* has only one register. The Suffix in the

CATS_REGISTER_IDENTIFIER '11' denotes that data from RegisterID 01.

Table 36   Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Value	ABCD1111	01	KWH	ALLDAY	-	NO

13.2   Two Single Element Meters, no controlled load

The NMI has two Accumulation Meters, each meter with single register. The data from submitted to MSATS as two suffixs.

Table 38   Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	ALLDAY	11	NO
	XYZA1112	01	KWH	ALLDAY	12	NO

13.3   Two Single Element Meters, one with controlled load

A *NMI* has two Accumulation Meters, each *meter* has a single register, and one *meter* is measuring a Controlled Load. The data from the two *meters* is submitted to MSATS as two Suffixes.

Table 40   Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	ALLDAY	11	NO

NTESMO

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
	XYZA1112	01	KWH	CONTROLLED	42	EXT

13.4 One Meter with Two Registers, one measuring a controlled load

NMI has one Accumulation Meter with two registers. The second register is measuring a Controlled Load.

Table 42 Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Value	ABCD1111	01	KWH	PEAK	11	NO
	ABCD1111	02	KWH	CONTROLLED	41	YES

13.5 Single Multi-function Meter

Accumulation Meter has 4 registers, one register being a Controlled Load.

Table 44 Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	PEAK	11	NO
	ABCD1111	02	KWH	SHOULDER	21	NO
	ABCD1111	03	KWH	OFFPEAK	31	NO
	ABCD1111	04	KWH	CONTROLLED	41	YES

13.6 Two meters, three registers. One register measures a controlled load

Table 46 Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	PEAK	11	NO
	ABCD1111	02	KWH	OFFPEAK	21	NO
	XYZA1112	01	KWH	CONTROLLED	42	EXT

NTESMO

14 Assignment of data – interval meters

This section details examples of the assignment of data for various Interval Meters.

14.1 One meter

The CATS_Register_Identifier table indicates that the meter has only one register. The Suffix in the CATS_REGISTER_IDENTIFIER [E1] denotes that data from RegisterID 01 contributes to the Suffix identified by Suffix E1

Table 48   Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Value	ABCD1111	01	KWH	INTERVAL	E1

E1 indicates that it is a single element measuring export.

14.2 Import/Export meter

Interval Meter has a two registers, registering import and export energy. Multiple ElectricityDataStream Suffixes (E1 and B1) are defined for the NMI.

The CATS_REGISTER_IDENTIFIER table indicates that the meter has two registers, one for IMPORT and one for EXPORT.

Table 50   Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	ABCD1111	E1	KWH	INTERVAL	E1
	ABCD1111	B1	KWH	INTERVAL	B1

Only one RegisterID with the Suffix 'E1' permitted per meter in CATS_REGISTER_IDENTIFIER. Only one RegisterID with the Suffix 'B1' permitted per meter in CATS_REGISTER_IDENTIFIER.

14.3 One meter: multiple registers

Interval Meter has a single measurement element registering import and export *energy,* reactive and *voltage*.

The CATS_Register_Identifier table indicates that the *meter* has five registers: two for IMPORT of *energy* and reactive; two for EXPORT of *energy* and reactive; and one for *voltage* monitoring.

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	ABCD1111	E1	KWH	INTERVAL	E1
	ABCD1111	B1	KWH	INTERVAL	B1

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
	ABCD1111	Q1	KVARH	INTERVAL	Q1
	ABCD1111	K1	KVARH	INTERVAL	K1
	ABCD1111	V1	VOLTS	INTERVAL	V1

14.4   One meter: Twin Measurement Elements

Certain multifunction *meters* have the capability for initial installation as an Accumulation Meter, but can be re-programmed to provide *interval metering data*.

The NT NER do not permit the use of two different types of *metering installation* on the one *NMI*, and therefore these two *metering* functions MUST NOT be active simultaneously in MSATS.

The CATS_REGISTER_IDENTIFIER can be used to record the *meter* capability.

The CATS_REGISTER_IDENTIFIER table values for this *meter* when it is operated as an Interval Meter are shown below. The RegisterID for the Accumulation Meter registers in this type of *meter* are user defined. The Interval Meter suffixes must be added to the *NMI* and made active, and the basic Suffixes made inactive at the same date.

Table52   Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	AB888888	E1	KWH	INTERVAL	E1
	AB888888	E2	KWH	INTERVAL	E2
	AB888888	11	KWH	PEAK	11
	AB888888	21	KWH	SHOULDER	21
	AB888888	31	KWH	OFFPEAK	31
	AB888888	41	KWH	CONTROLLED	41

14.5   UMCP

Table 54   Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	Dummy Value	E1	KWH	INTERVAL	E1

NTESMO

16 Data type conventions

The Browser formats used in section 16 are as defined in the following table.

The value of "x" must be positive and cannot be zero.

For explanation of the aseXML data types shown in section 16 refer http://www.w3.org/TR/xmlschema-0/#simpleTypesTable

Table 56   BROWSER FORMATS

	Format	Definition
1	CHAR(x)	Indicates a field that can only contain alphanumeric characters and must contain exactly "x" characters. Note that leading and trailing "spaces" are considered significant (i.e. form part of the "x" characters for the field).
2	VARCHAR2(x)	Indicates a character field containing up to "x" characters.
3	NUMBER(x)	Indicates a positive integer (zero or above) up to "x" significant digits long; any leading zeroes are not significant and hence "050" is equivalent to "50".
4	NUMBER(x.y)	Indicates a positive number with up to "x" significant characters to the left of the decimal point and "y" decimal places after the decimal point (trailing zeros are optional). In other words, the maximum length of the field as a whole is "x"+"y"+1 characters (the +1 reserving space for the decimal point).
